

# Storage

- ◉ When storing a Saizen® cartridge, always keep your child's easypod™ in its box in the fridge, not the freezer (should be stored at 2-8°C/36-46°F). Place in the fridge door in an upright position, with the arrow in the box pointing upwards.
- ◉ Before storing, the needle should always be detached. BUT.....Saizen® cartridges can also be stored out of the fridge for up to 7 days. This room temperature storage does come with some conditions.
  1. After first injection, the Saizen® cartridge or the easypod™ device containing the Saizen® cartridge should be stored in a fridge for a maximum of 28 days.
  2. However, during this time, you can take it out of the fridge for a total of 7 days and these do not need to be consecutive (in a row). This means you can take it out and put it back in the fridge as many times and for as long as required so long as the total time does not exceed 7 days out of the fridge.
  3. If the cartridge is out of the fridge for more than 7 days in total please discard and replace the cartridge.
